**DETAILED ACTION**

***Claim Objections***

1. Claim 2 is objected to because of the following informalities: "from %" should be in the range from 4%. Appropriate correction is required.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-61 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thompson et al. (5,834,449) in view of Ambrisco et al. (6,007,557). Thompson et al. disclose non-thrombogenic materials for coating on a filter or stent for inhibiting the formation and progression of abnormal vascular aneurysm (col. 8, lines 10-38). Although, Thompson et al. does not disclose a filter system as claimed, attention is directed to Ambrisco et al. disclose a filter system as claimed and suggest the filter membrane may be coated with a non-thrombogenic material (col. 3, lines 10-30 and see the detail section for the filter system embodiments). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the filter as disclose by Ambrisco et al. to deliver the non-thrombogenic material of Thompson et al. to a treatment site. Doing so would meet the limitations as claimed.

Art Unit: 3731

In regarding to the range of percentage of the coating thickness, the range of the percentage as claimed is a typical range of thickness for coating a vascular drug delivery implant in the art for maintaining the mechanical characteristic of the implant. Therefore, it would have been obvious to one having ordinary skill in the art to apply the coating as disclosed by Thompson on the filter as disclosed by Ambrisco et al. such that the coating within the range as claimed in order to maintaining the mechanical characteristic of the filter body.
